

## Campus Technology Services

### Toll Bypass

As you know, Mat-Su College deployed a VoIP based telephone system in 2008. One of the benefits of VoIP systems is something called Toll Bypass. This provides savings in long distance charges by diverting those calls to the data network rather than traditional long distance carriers.

Effective 7/29/2009, all calls to the Anchorage campus will be via toll bypass and will no longer require a long distance access code. You will still need to use your long distance access codes when calling any location.

1. Callers making an intra-campus (on-campus) call will continue to dial 4-digit extensions.
2. Callers making calls between extensions at Mat-Su and any other campus will dial the normal 8+ the 7-digit phone number.
3. In the event of a DS-3 (WAN) or Inter-Campus Trunk failure a caller attempting to make an inter-campus call (see #2) will hear a fast busy which is indication the toll bypass is down and that they must use their long distance code as a temporary workaround.

List of Campuses that are already in our toll bypass are:

Anchorage	(UAA)
Fairbanks	(UAF)
Homer	(KBC)
Kenai	(KPC)
Kodiak	(KOC)
Valdez	(PWSCC)

Coming soon is: Juneau (UAS)

Please contact CTS at 745-9796 if you have questions.
